

Absolute encoders – singleturn

Standard optical	Sendix F5858 / F5878 (shaft / hollow shaft)	EtherNet/IP
-------------------------	--	--------------------

New generation - ready for the future.

The optical absolute singleturn and multiturn Sendix F58 EtherNet/IP encoders are based on the latest CIP version v3.32 and EtherNet/IP version v1.30.

Key features are neighborhood detection, gear factor, the calculation of acceleration and simultaneous connection to up to 5 controllers. Thanks to the new framework, the functionality can be extended at any time via the integrated web server by update.

EtherNet/IP™

Safety-Lock™

High rotational speed

Temperature range
-40°... +80°C

High protection level
IP67

High shaft load capacity

Shock / vibration resistant

Magnetic field proof

Reverse polarity protection

Optical sensor

Features

- Scaling of the total resolution via the gear factor.
- High resolution: singleturn up to 19 bit.
- High-precision setting of velocity and acceleration values through filter and hysteresis.
- Device Level Ring (DLR) ring redundancy of the network with two network ports.
- Low RPI time of minimum 1 ms - this makes the encoder usable for time-critical applications up to 1000 Hz update frequency.

Benefits

- Direct mapping of pitch ratios, e.g. for gear ratios or gear reductions.
- Precise position detection.
- Cost and time savings when setting up the control system.
- Communication is maintained when the ring structure is interrupted.

Settings rotary switch

Switch position	Meaning
000	Address assignment via DHCP
1 ... 254	Use stored subnet (standard: 192.168.1.x, mask: 255.255.255.0) The last digit „x“ of the IP address is determined by the rotary switch.
300	Explicit Protection Mode OFF
555	Resetting the encoder to factory setting. To reset, this switch position must be set. If necessary, switch off the operating voltage and switch it on again within 10 seconds. After that, the encoder can be switched off and the switch setting desired during operation can be made. All parameters are now set to factory settings - both the encoder objects and the TCP/IP settings.
800	Explicit Protection Mode ON
Other positions	Reserved, do not use!
